

Pipe Lengths Example

Q: how many cells do the pipes pass through?

Ground Truth: 14,13,11,2

GPT-5.2 on Cartesian: 14,13,11,2

GPT-5.2 on Polar: 20,14,11,3

I need to count the cells that each pipe passes ... I'm guessing there are about **6 rings** ... **maybe there are eight of them**... I notice **8 radial lines**, suggesting there could be **8 sectors** ... I'm estimating that there are **about 6 rings** between there might be **at least 5 or 6 rings**. ... I'll assume the grid may be **6x8** ... perhaps there are **7 rings**, ... making it **48**... I suspect there are **about 64 total cells**, likely structured as **6 rings by 8 sectors**. ... As I count the visible spokes, I note **at least 5 or maybe 8 total**... I believe there are **6 rings**... There's a chance of having **8 sectors** ... **totaling 42 cells**. I'm defining sectors **A through F** around the circle, starting at 0° ... **There are 7 rings visible** ... I need to break down the lengths of each color based on the total of **42 cells**. ... I think I've settled on **20, 14, 11, and 3** ...
